

Bisou — Today Page: Full Product & Technical Spec

UX Principle: Clarity Before Terminology

This principle is mandatory for every block without exception.

ALWAYS show first:

what it means for the user (plain language, no jargon)

ON TAP show:

why / where it comes from / Vedic terms / technical details

Vedic terms (Pushya, Dwadashi, Shukla Paksha, Rahu Kaal) **are never the headline** of a block. They can appear as a label, tag, or part of the expanded view — but never as the first thing the user sees.

3. Dynamic Background

Like weather apps — the entire Today page background changes based on the day's energy and special events. Selected deterministically, no runtime generation. The system picks an asset key; design creates the assets.

20 distinct themes × 3 time-of-day tints = up to 60 visual states per day. The base theme changes once per day at midnight. The tint layer shifts automatically with local time (morning / afternoon / evening overlay).

Background selection (priority order — first match wins)

```
function resolveBackgroundKey(context) {
  const {
    stars_align,
    is_eclipse,
    is_purnima,
    is_amavasya,

Afternoon	(noon – sunset)	→ neutral / no tint	opacity 0.00
Evening	(sunset – midnight)	→ deep indigo overlay	opacity 0.15

Rules:

- Base background key resolved **once per day** at midnight, stored in `today_summary_cache`.
- Tint applied client-side from local time — no cache needed.
- Transition: 0.8s fade when background key changes since last visit.
- Tint shift (morning → afternoon → evening): 1.5s slow fade.

4. Block-by-Block Technical Spec

Block 0: Header

AI: NO

"{Weekday}, {Month} {day}"	← from today_date
"Good {Morning Afternoon Evening}, {name}"	← from local time + user.name
🔔	← notification bell
🔥 {streak}-day	

Check-in is recorded automatically when user opens the Today page. No user action required.

Streak Rule

If user checked in yesterday:	streak = yesterday_streak + 1
If user missed yesterday:	streak = 1 (today is day 1)

Missing a day resets the streak to 1 on next visit.

Streak pill and modal details: see [Moon Streak \(header feature\)](#).

Block 1: Day Synthesis

AI: NO — fully deterministic.

Purpose

Transform today's panchang into **one plain-language sentence** that communicates what kind of day it is. Users must not need to know any Vedic terms to understand the main message.

Required inputs

```
today_date, today_vaara (weekday string), average_score (number 0–100),
is_purnima, is_amavasya, is_eclipse, stars_align,
is_nakshatra_birthday, is_tithi_birthday, is_vaara_birthday,
today_nakshatra (index 0–26), today_tithi (1–30),
moon_nakshatra_at_start_of_day, moon_nakshatra_at_end_of_day,
moon_sign_at_start_of_day, moon_sign_at_end_of_day,
transit_time (if applicable), sign_transit_time (if applicable),
user_energy_band ('high' | 'moderate' | 'low'),
social_proof_count (from today_summary_cache)
```

Step 1 — Compute average_score

```
average_score = mean of all 6 individual category scores
(love, career, health, money, social, family – calculated in Block 2)
```

Step 2 — Select synthesis_type by priority

```
if stars_align:          synthesis_type = "stars_align"
elif is_eclipse:         synthesis_type = "eclipse"
elif is_purnima:         synthesis_type = "purnima"
elif is_amavasya:        synthesis_type = "amavasya"
elif is_nakshatra_birthday: synthesis_type = "nakshatra_birthday"
elif is_tithi_birthday:  synthesis_type = "tithi_birthday"
elif is_vaara_birthday:  synthesis_type = "vaara_birthday"
else:                    synthesis_type = "regular_day"
```

Step 3 — Build synthesis sentence

For special days (types 1–7), use fixed strings:

```
const SPECIAL_DAY_SENTENCES = {
  stars_align:
    "A rare day – three Vedic cycles align with your birth. Uniquely yours.",
  eclipse: "Eclipse day. Time to release the old and prepare for renewal.",
  purnima:
    "Full Moon. Energy at its peak – good for completing things and celebrating.",
  amavasya: "New Moon. A quiet day, ideal for new intentions and inner work.",
  nakshatra_birthday:
    "Today's sky matches your birth sky. One of the most personal days of the month.",
  tithi_birthday:
    "The Moon has returned to its birth phase. Good for relationships and self-care.",
  vaara_birthday:
    "Your birth planet rules today. Your natural energy is amplified.",
};
```

For `regular_day`, combine vaara base + energy band suffix:

```
const VAARA_BASE = {
  Sunday: "Sun's day.",
  Monday: "Moon's day.",
  Tuesday: "Mars's day.",
  Wednesday: "Mercury's day.",
  Thursday: "Jupiter's day.",
  Friday: "Venus's day.",
  Saturday: "Saturn's day.",
};

const VAARA_SUFFIX = {
  // high = average_score >= 71
  Sunday: {
    high: "Favourable for health, clarity, and vitality.",
    moderate: "Energy is steady – go at your own pace.",
    low: "A quiet day. Rest matters more than achievement.",
  },
  Monday: {
    high: "Favourable for family, care, and intuition.",
    moderate: "A calm day. Good for home and domestic matters.",
    low: "Low energy – a good time for quiet recovery.",
  },
  Tuesday: {
    high: "Favourable for bold action and overcoming obstacles.",
    moderate: "Moderate energy – don't force it, but don't stop.",
    low: "Avoid conflict and overexertion today.",
  },
  Wednesday: {
```

```

    high: "Favourable for negotiation, learning, and planning.",
    moderate: "A good day for communication, without big decisions.",
    low: "Mercury is quiet. A day for observation, not action.",
  },
  Thursday: {
    high: "Favourable for growth, learning, and important decisions.",
    moderate: "A steady day – learning and spiritual practice will help.",
    low: "Jupiter is quiet. Rest and build your strength.",
  },
  Friday: {
    high: "Favourable for relationships, beauty, and joy.",
    moderate: "A calm Venus day – good for personal time.",
    low: "Venus asks for recovery. Time for yourself.",
  },
  Saturday: {
    high: "Favourable for structured work and discipline.",
    moderate: "A good day for routine and clearing your task list.",
    low: "Saturn in shadow. Rest without guilt.",
  },
};

// energy_band derived from average_score:
//   average_score >= 71 → 'high'
//   average_score 41–70 → 'moderate'
//   average_score <= 40 → 'low'

const sentence =
  VAARA_BASE[today_vaara] + " " + VAARA_SUFFIX[today_vaara][energy_band];

```

Example: Thursday, average_score = 78 → "Jupiter's day. Favourable for growth, learning, and important decisions."

Step 4 — Moon Transit Line

Shown **only** if the Moon changes nakshatra or sign today.

Calculation:

moon_nakshatra_at_start = nakshatra of Moon at 00:00:00 local time
(Swiss Ephemeris)

moon_nakshatra_at_end = nakshatra of Moon at 23:59:59 local time

moon_sign_at_start = rashi of Moon at 00:00:00 local time

moon_sign_at_end = rashi of Moon at 23:59:59 local time

Priority: if sign changes, show sign change (encompasses nakshatra change).

if only nakshatra changes (same sign), show nakshatra change.
if neither changes, show nothing.

For sign change:

sign_transit_time = binary search on ephemeris for exact crossing time

```
display: "🌙 Moon enters {RASHI_EN_NAME[new_sign]} at
{sign_transit_time} – {SIGN_TRANSIT_EFFECT[new_sign]}"

For nakshatra change only:
transit_time = binary search on ephemeris for exact crossing time
display: "🌙 Moon moves into {NAKSHATRA_EN_NAME[new_nakshatra]} at
{transit_time}"
```

Rashi names and transit effects (12 entries):

Rashi (EN)	Transit effect
Aries	expect more initiative and decisiveness
Taurus	mood becomes more stable and sensual
Gemini	day becomes more dynamic, talkative mood
Cancer	emotions deepen, a pull toward home
Leo	energy rises and the urge to express yourself
Virgo	attention to detail and practical matters
Libra	need for harmony and balance
Scorpio	deep and intense mood
Sagittarius	optimism rises and a desire for movement
Capricorn	serious and structured mood
Aquarius	independent mood, original ideas
Pisces	dreamy and intuitive mood

Step 5 — Social Proof Line

Real data. Shown only if `count >= 10`.

🌐 `${count}` people in Bisou are having a `${day}` day today

`energy_band` for a user: `average_score >= 71 → 'high', 41–70 → 'moderate', <= 40 → 'low'`.

Block 2: Today's Energy (3 categories)

AI: Optional on tap only — max 3 AI calls per user per day, cached until midnight.

3 categories and their aggregation

Category	Includes	Formula
Health	Health	<code>health_score</code>

Category	Includes	Formula
Relationships	Love + Social + Family	<code>round((love_score + social_score + family_score) / 3)</code>
Career & Money	Career + Money	<code>round((career_score + money_score) / 2)</code>

All 6 base scores are aggregated into 3 categories for display.

Formulas for 6 base scores

```
raw_score = 50 + tithi_modifier + vaara_modifier + nakshatra_modifier + birthday_bonus
final_score = clamp(raw_score, 0, 100)
```

Tithi modifiers (Shukla paksha / waxing half):

Display phrase per category + band

Shown on card directly below the level label:

Category	High	Moderate	Low
Health	"Body is on your side"	"Listen to your body"	"Time to rest"
Relationships	"A great day for the people you love"	"Steady relationships"	"Time for yourself"
Career & Money	"Energy for work is here"	"A steady workday"	"Avoid big decisions"

Visual indicator

Each card shows a horizontal bar or arc (no number):

- Green → High

-  Yellow → Moderate
-  Muted → Low

Percentage and numeric scores are never shown to the user — only the level label (High / Moderate / Low) on the collapsed row.

On tap — expanded view

Tapping a category row expands an inline panel below it. Only one category may be open at a time.

What the user sees:

A short paragraph (2–3 sentences) explaining *why* the level is what it is — in plain language, using Vedic terms (tithi, vara, nakshatra, ruling planet) but **no numbers, percentages, or score tables**.

Example (Health · High):

Health carries strong graha-shakti today. Surya governs the 1st house — the body, prana, and daily strength. Purnima tithi — Chandra at full brilliance in Shukla paksha (waxing Moon) — floods the chart with lunar shakti for physical vitality and ojas. Chandra in Pushya nakshatra — presided by Brihaspati, Tamas guna — nourishes physical vitality and ojas.

Each explanation weaves **panchang** elements (tithi, vara, paksha, nakshatra) with **graha** lords (Surya, Chandra, Shukra, Shani, Guru, Budha), **house** themes, and nakshatra **devata/guna** where relevant. No numbers in user-facing text.

Interaction:

```
onTap(category_key):
    if expanded == category_key → collapse
    else → expand category_key, collapse others

if explanation not in cache:
    call AI once (see below) – AI receives score internally but output must
    contain no numbers
    store in today_summary_cache.energy_explanations[category_key]
else:
    read from cache
```

Implementation notes for programmers (internal — not shown in UI):

```
// Dominant component for merged categories (used to pick which modifiers
// drive the explanation)
dominant_relations = argmax(love_score, social_score, family_score)
dominant_affairs   = career_score >= money_score ? 'career' : 'money'

function getCategoryBreakdown(user, category_key):
    underlying = resolve_underlying_category(category_key)
    idx = index of underlying in [love, career, health, money, social,
    family]
```

```

tithi_mod      = lookup_tithi_modifier(today_tithi, today_paksha, idx)
vaara_mod      = lookup_vaara_modifier(today_vaara, idx)
nakshatra_mod  = lookup_nakshatra_modifier(today_nakshatra, idx)
birthday_mod   = lookup_birthday_bonus(user.birthday_flags, idx)
raw = 50 + tithi_mod + vaara_mod + nakshatra_mod + birthday_mod
return { tithi: tithi_mod, vaara: vaara_mod, nakshatra: nakshatra_mod,
birthday: birthday_mod }

// Map modifier sign (+/-/0) → natural-language sentence per source
(tithi, vaara, nakshatra, birthday)
// Pick top 2 non-zero influences + band intro sentence → user-facing
paragraph
// merged_score used only for band label and AI input – never displayed

```

On tap — AI explanation (cached, max 3/day/user)

INPUT:

```

category_name, merged_score, label, vaara, vaara_planet,
tithi_name, nakshatra, birthday_flags, pronouns

```

For merged categories:

"Relationships": dominant component = whichever of love/social/family has highest individual score

"Career & Money": dominant component = career if career_score > money_score, else money

SYSTEM PROMPT:

"Write 2–3 sentences explaining why {category_name} energy is {label} today. Use Vedic astrology terms naturally: tithi, vara, paksha, nakshatra, graha names (Surya, Chandra, Shukra, Shani, Guru, Budha),

relevant houses, and nakshatra deity where relevant. Warm and practical.

No numbers, percentages, or score values in the output.

No untranslated Sanskrit jargon – explain terms in context. Use {pronouns}."

CACHE: per user per day per category (3 calls max/day/user).

Block 3: Nakshatra of the Day

AI: NO — deterministic 27-entry lookup.

Purpose

Shows today's Moon nakshatra as a practical, human-readable insight. The symbol and one-sentence meaning are immediately understandable without any Vedic knowledge. The term "nakshatra" is introduced only as context, never as the headline.

Data source

`today_nakshatra_idx` = index of the Moon's nakshatra at the time of local midnight (0–26), from Swiss Ephemeris. Same value used in Block 2 nakshatra modifiers.

How it works

Each tip has a fixed list of **tags** — conditions under which it is relevant. The algorithm scores every tip against today's active signals and picks the top 3 by match count. Ties broken by fixed position in content set (earlier wins). No randomness at any stage.

Build today's active signals

Active signals = union of:

→ today's vaara tag

→ paksha tag (Shukla or Krishna)

→ Purnima and/or Amavasya if applicable

→ Chaturdashi if tithi is 14 or 29

→ Nakshatra_Dev or Nakshatra_Intense based on today's moon nakshatra

→ category tags where individual score is High (≥ 71) or Low (≤ 40) for

each of 6 categories
 → NakshatraBirthday / TithiBirthday / VaaraBirthday / StarsAlign if true

Note: category tags use the 6 **individual** scores (love, career, health, money, social, family), not the 3 merged scores from Block 2.

Score and select

tip_score = number of active signals that appear in the tip's tags
 Select top 3 do tips by score (ties: earlier in content set wins)
 Select top 3 avoid tips by score (same rule)

Fallback hierarchy

1. Full match – use all active signals
2. Vaara only – if <3 results, filter to tips tagged with today's vaara alone
3. Paksha only – if <3 results, filter to Shukla or Krishna only
4. Universal – fill remaining slots from tips with no category/special signals

Every vaara must have at least 3 Do and 3 Avoid tips tagged to it alone (minimum coverage rule).

Rahu Kaal calculation

```
Inputs: sunrise_time, sunset_time, today_vaara

day_duration_minutes = (sunset_time - sunrise_time) in minutes
segment_duration_min = day_duration_minutes / 8

Rahu Kaal segment index by vaara (1 = first segment after sunrise):
  Sunday:    8  (last segment of the day)
  Monday:    2
  Tuesday:   7
  Wednesday: 5
  Thursday:  6
  Friday:    4
  Saturday:  3

rahu_start = sunrise_time + (segment_index - 1) × segment_duration_min
rahu_end   = rahu_start + segment_duration_min
```

Example (sunrise 06:00, sunset 20:00, Thursday):

```
day_duration    = 840 min
segment         = 105 min (1h 45m)
Thursday index  = 6
rahu_start      = 06:00 + 5 × 105 = 14:45
rahu_end        = 14:45 + 105 min = 16:30
→ Display: "▲ Rahu Kaal  14:45–16:30"
```

On tap explanation:

Rahu Kaal – a daily 1.75-hour period associated with Rahu (the ascending lunar node). Considered inauspicious for starting new ventures, signing agreements, travelling, and making important decisions.

Does not apply to activities already in progress.
Calculated from sunrise time.

Abhijit Muhurta calculation

```
solar_noon      = sunrise_time + (sunset_time - sunrise_time) / 2

abhijit_start = solar_noon - 24 minutes
abhijit_end   = solar_noon + 24 minutes
```

Example (sunrise 06:00, sunset 20:00):

```
solar_noon      = 06:00 + 420 min = 13:00
abhijit_start = 12:36
abhijit_end   = 13:24
→ Display: "✦ Abhijit 12:36–13:24"
```

On tap explanation:

Abhijit Muhurta – the "victorious moment" of the day,
centred around solar noon. Neutralises even unfavourable
astrological positions.

Ideal for important beginnings, signing agreements,
key decisions, and anything meant to have a lasting effect.

Exception: Wednesday – Abhijit is considered weaker on this day.

Hora calculation (Chaldean order)

Chaldean planet order (index 0–6):

0=Saturn, 1=Jupiter, 2=Mars, 3=Sun, 4=Venus, 5=Mercury, 6=Moon

Day ruler index (planet that rules Hora 1 = first hora of the day,
starting at sunrise):

```
Sunday:   Sun    (idx 3)
Monday:   Moon   (idx 6)
Tuesday:  Mars   (idx 2)
Wednesday: Mercury (idx 5)
Thursday: Jupiter (idx 1)
Friday:   Venus  (idx 4)
Saturday: Saturn (idx 0)
```

```

hora_index = floor((current_local_time - sunrise_time) / 60 minutes)
hora_planet_idx = (day_ruler_idx + hora_index) % 7
hora_planet = CHALDEAN_ORDER[hora_planet_idx]

hora_start = sunrise_time + hora_index × 60 min
hora_end    = hora_start + 60 min

```

Storage: no storage needed. Computed at render time from `vaara` + `sunrise_time`. Pre-computed into `today_summary_cache`.

Block 7: Cosmic Body Map

AI: NO

Fixed 27-entry lookup: today's moon nakshatra → body area + awareness tip.

What is displayed

```

{body_icon} {NAKSHATRA_NAME} DAY
Body focus: {body_area}
"{awareness_tip}"

```

Visual: SVG body outline with governed area highlighted. Tap highlighted zone for full tip.

On tap — Vedic details

Tapping the card expands an inline panel with a word-only Vedic explanation (no numbers). Built from:

- Today's Moon nakshatra (`today_nakshatra_idx`)
- Nakshatra devata, guna, and symbol (from Block 3 lookup)
- Body area from the 27-entry Kala Purusha mapping
- Current paksha (Shukla / Krishna)

Example (Pushya · chest, stomach & lungs):

In the nakshatra–body correspondence (Kala Purusha), Chandra in Pushya activates the chest, stomach & lungs. Pushya is ruled by Brihaspati, carries Tamas guna, and is symbolised by Flower / circle — during Shukla paksha (waxing Moon), somatic sensitivity gathers in this region rather than spreading evenly through the body. Jupiter's own star — excellent for almost any positive activity. Today's practical focus: digestive energy is sensitive — eat lighter and avoid skipping meals.

Step 1 — Find birth planet and elapsed fraction:

```

function computeDashaStart(natalMoonLongitude) {
  const NAKSHATRA_SPAN = 360 / 27; // 13.3333... degrees

  const nakshatraIdx = Math.floor(natalMoonLongitude / NAKSHATRA_SPAN);
  const positionInNakshatra = natalMoonLongitude % NAKSHATRA_SPAN;
  const fractionCompleted = positionInNakshatra / NAKSHATRA_SPAN;
  const fractionRemaining = 1 - fractionCompleted;

  const birthPlanet = NAKSHATRA_RULERS[nakshatraIdx];
  const firstDashaYearsRemaining =
    PLANET_YEARS[birthPlanet] * fractionRemaining;

  return { birthPlanet, firstDashaYearsRemaining };
}

```

Step 2 — Build full Mahadasha timeline:

```

function buildMahadashaTimeline(
  birthDate,
  birthPlanet,
  firstDashaYearsRemaining,
) {
  const timeline = [];
  let cursor = new Date(birthDate);

  // First (partial) dasha
  const firstEnd = addYears(cursor, firstDashaYearsRemaining);
  timeline.push({
    planet: birthPlanet,
    start: new Date(cursor),
    end: firstEnd,
  });
  cursor = firstEnd;

  // Remaining full dashas
  let planetIdx = (PLANET_ORDER.indexOf(birthPlanet) + 1) % 9;
  const maxDate = addYears(new Date(birthDate), 120);

  while (cursor < maxDate) {

```

```

    const planet = PLANET_ORDER[planetIdx];
    const end = addYears(cursor, PLANET_YEARS[planet]);
    timeline.push({ planet, start: new Date(cursor), end });
    cursor = end;
    planetIdx = (planetIdx + 1) % 9;
  }

  return timeline;
}

```

Step 3 — Find current Mahadasha:

```

function getCurrentMahadasha(timeline, today) {
  return timeline.find(d => d.start <= today && today < d.end);
}

```

Step 4 — Build Antardasha timeline within current Mahadasha:

```

function buildAntardashaTimeline(mahadasha) {
  const antardasha = [];
  let cursor = new Date(mahadasha.start);
  const mahaYears = PLANET_YEARS[mahadasha.planet];

  // Antardasha sequence starts with the Mahadasha planet itself
  let planetIdx = PLANET_ORDER.indexOf(mahadasha.planet);

  for (let i = 0; i < 9; i++) {
    const planet = PLANET_ORDER[(planetIdx + i) % 9];
    const durationYears = (mahaYears * PLANET_YEARS[planet]) / 120;
    const end = addYears(cursor, durationYears);
    antardasha.push({ planet, start: new Date(cursor), end });
    cursor = end;
  }

  return antardasha;
}

```

Step 5 — Find current Antardasha:

```

function getCurrentAntardasha(antardashaTimeline, today) {
  return antardashaTimeline.find(a => a.start <= today && today < a.end);
}

```

addYears helper must handle fractional years accurately:

```
function addYears(date, years) {
  const totalDays = years * 365.25; // Vimshottari uses 365.25 days/year
  return new Date(date.getTime() + totalDays * 24 * 60 * 60 * 1000);
}
```

6. Dynamic Background System

See [Section 3 — Dynamic Background](#) for the full spec, all 20 asset keys, the time-of-day tint system, and the selection algorithm.

The background key is stored in `today_summary_cache.background_key` and resolved once per day at midnight.

7. Caching & Performance

Pre-generation job

All deterministic content is pre-computed at **00:00 local time** for active users via `today-page-pregen` job.

Cache table: `today_summary_cache` (per user per date)

Field	Source	TTL
<code>background_key</code>	deterministic	until midnight
<code>synthesis_type</code>	deterministic	until midnight
<code>synthesis_text</code>	deterministic	until midnight

AI calls per user per day

Call	Count	Model	When
Energy category explanation (on tap)	0–3	gpt-4o-mini	First tap on each of 3 categories
Max total	3		

Max **3** AI calls per user per day — all cached until midnight.

Response time targets

- Today page initial load: **< 200ms** (all from cache)
- Energy tap AI explanation (first time): **< 2s**
- Energy tap AI explanation (cached): **< 50ms**
- Moon transit calculation: **< 100ms** (binary search on ephemeris, pre-cached)

8. AI Usage Summary

Block	AI	When	Cache
Block 2 (Energy tap)	✅ gpt-4o-mini	First tap per category per day	Until midnight
All other blocks	❌	—	—

Maximum 3 AI calls per user per day.

9. Determinism Guarantee

Every block marked **AI: NO** is fully deterministic:

Given the same birth_data, today_date, and user location, the output is always identical.

This is ensured by:

- No Math.random() anywhere in scoring, selection, or lookup
- Do/Avoid tie-breaking by fixed position in content set (stable sort, earlier entry wins)
- Block 5 texts selected by direct three-key lookup: TEMPLATES[vaara_idx][slot][energy_band]
- All panchang calculations via Swiss Ephemeris with Lahiri ayanamsa
- Dasha calculation uses addYears with 365.25 days/year (Vimshottari standard)
- Social proof is real data (not deterministic), cached with 30-min TTL — the only non-deterministic non-AI value on the page
